LEARNING MORE ABOUT POLYMER CLAY AND MAKING SMALL BOXES

By

Marlene Gremillion

- Polymer Clay (I use premo, premo accents and sculpey souffle strong clays and easier on your hand to condition). Variety of colors you like. Note you can also mix colors Rough estimate 8 blocks and you may want to purchase the primary colors (fuchsia, zinc yellow, cobalt blue, wasabi, sunshine, green, pomegranate, turquoise, purple, translucent, gold, copper, and some pearls are a few of my favorite colors). Black for making the box or some scrap clay.
- Pasta machine dedicated to polymer clay
- Roller (clear plastic is what I use)
- Tissue blade, one stiff and one more flexible that is sharp
- Needle Tool is handy but could use a large needle
- Clay rib flexible metal (helpful)
- Surface to work on (I use a tempered glass small tabletop or cutting board with a graph for measuring taped under it). You can also find some tempered glass with a graph already on it but be sure it is a smooth surface. Ceramic tiles 4" or 6" come in handy with the mokume gane
- Rubbing alcohol in a spray bottle for cleanup. Baby wipes are also handy for this
- Paper towels or old hand towel
- Rubber stamps that have a deep texture but not too complicated.
- Parchment paper for smoothing surface of clay
- Oven for curing your pieces
- Plastic wrap
- Some smaller canes you have made
- Repel Gel
- Liquid polymer clear or poly paste
- Cookie cutters in a variety of sizes. I will be using round and oval ones
- Make sure you wear your glasses if you need them for close vision and have good lighting
- I will be creating a Facebook group site just for the students only to share thoughts, ideas, discussion, and places to find materials. Once you register with ESSA, I will add you to the sight.

We will be making mokume gane, Sutton slice, photo transfer and inlays to apply to boxes we will learn to make.

Any questions feel free to contact me
